System analysis & computer project management

Travel Scheduler

Project manager - Konrad Zdanowicz

Travel scheduler is a web application, which main goal is to ease the trip planning, providing few features, such as an accomodation browser, POI (points of interest) suggestion system, cost estimation and much more.

Features:

- Customizing start, end and middle points

- Suggestions of the most suitable accomodation sites by the way

- Suggestions of most attractive POI based on the user input

- Cost & length estimation

- Interactive route preview

- Microcommunity, sharing options

- Google Directions-like developer API

- Responsiveness and accessibility
